

UNIT-1

#Principles of Human Communication

Communication:

Sender → Encoding → Message → Channel →

Receiver → Decoding → Feedback

Noise
Context

Noise

- Physical (loud music, distraction)
- Physiological (hunger, fatigue, headache)
- Psychological (stress, daydreaming, anxiety)
- Semantic (confusing words, jargons)

Linear model = one way

Interactive model = feedback

Transactional model = simultaneous exchange

Perception = how we ~~sense~~ make sense of our world

- Selection = focus our attention on certain stimuli
- Organization = categorize selected info into patterns
- Interpretation = assign meaning to organized info based on past experience

Verbal Communication (Language & words)

Language is symbolic, arbitrary & rule governed

Denotative vs Connotative

(a) Denotative = dictionary/literal meaning

(b) Connotative = associate/emotional meaning

↑ No direct, inherent relationship between a word (only) & object it represents

Non Verbal Communication (without relying primarily on words)

Included:

- * - Kinesics (body movement)
- Proxemics (space)
- Haptics (touch)
- Chronemics (time)
- Paralanguage (tone/pitch) or Vocalics
- Oculistics (eye contact)

~~Functions:~~

(a) Hearing = Passive, physiological process of sound waves hitting your eardrums

(b) Listening = Active, intentional, cognitive process

- Critical of receiving, interpreting, recall
- Informational & responding to messages
- Empathic/therapeutic

Functions:

- Repeat (body & words do same thing)
- Complement (body & words support each other)
- Substitute (shaking your head instead of saying no)
- Contradict (saying 'I'm fine' while crying)
- Accentuate (emphasize particular word using tone or gesture)
- Regulate (non verbal signals control the flow of conversation)

• Persuasion Theories -

(a) Elaboration Likelihood Model (ELM)

- Petty & Cacioppo

└ Central route

└ High thought / analysis of message content → more durable attitude change

└ Peripheral route

└ Relies on superficial cues (attractiveness, emotion) rather than argument quality → less durable change

(b) Social Judgment Theory

- Sherif

└ People judge new messages against their attitude, placed on a continuum

└ ~~Lat~~ Latitude of acceptance

└ Latitude of rejection

└ Latitude of noncommitment (neutral)

Self concept = your perception/beliefs about yourself (Who am I?)

Self esteem = how positively or negatively you evaluate yourself

Impression management = attempting to control

how others perceive you

(How do I feel about what I am?)

Attribution = explaining why someone ~~en~~ behaved a certain way

(a) External attribution = you explain behavior using circumstances

(b) Internal attribution = you explain behavior using something about the person

Ethnocentrism = judging another culture using your own culture as the standard

Cultural relativism = trying to understand behavior within that culture's own context

* Difference :

- Stereotype = belief
- Prejudice = attitude
- Discrimination = behavior

Communication theory theories -

- 1) Attribution theory
- 2) Constructivism = people construct meanings based on their experience
- 3) Persuasion
- 4) Group Think

5) Face negotiation theory (Stella Ting Toomey)

Communication & conflict management are influenced by culture & concerns about maintaining face

6) Rhetorical criticism = Systematic analysis/evaluation of rhetorical messages

UNIT-2 | #Interpersonal Theory

Functions

- Meeting social/psychological needs
- Building & maintaining relationships
- Exchanging info
- Influencing attitudes/behavior

Relationship development

- (a) ~~Self~~ Self disclosure = revealing personal info
- (b) Uncertainty reduction theory = people are motivated to reduce uncertainty through passive, active & interactive strategies
- (c) Social penetration theory (Altman & Taylor) = relationship develops through breadth & depth of

*Conflict Style

1) Competing

2) Accommodating

3) Avoiding

4) Compromising

5) Collaborating

Constructive conflict

Johari Window

(Known/Unknown)

increasing self disclosure

*Conflict management

Style	Concern for self	Concern for others	Description
1) Competing	High	Low	Win-lose; assertive, uncooperative
2) Accommodating	Low	High	Yield to the other person
3) Avoiding	Low	Low	Withdraw the conflict
4) Compromising	Medium	Medium	Both give something up
5) Collaborating	High	High	Win-win; problem solving

Constructive vs ~~conflict~~ destructive

Conflict: Constructive focuses on the issue & seeks resolution

Destructive becomes personal/escalatory

Johari

Window = model for understanding self disclosure

Hidden
(Known to self; unknown to others)

Blind
(Unknown to self; known to others)

Open
(Known to self & others)

Unknown
(Unknown to self & others)

increasing self disclosure

Krapp's relational stages -

(a) Coming Together

- 1) Initiating
- 2) Experimenting
- 3) Intensifying
- 4) Integrating
- 5) Bonding

(b) Coming Apart

- 6) Differentiating
- 7) Circumscribing
- 8) Stagnating
- 9) Avoiding
- 10) Terminating

You-message = place blame on the other person
I-message = expresses your own feelings / needs without directly blaming

Types of Listening:

- + Informational = understand info
- Critical = evaluate info
- + Empathic = understand someone's feeling / perspective
- Appreciative = enjoy the communication
- Active = deliberately demonstrating attention & understanding

Listening barriers

- Distractions
- Selective listening
- Information overload
- Confirmation bias
- Emotional reactions
- Pseudo listening

Conflicts

- Functional conflict
 - Creativity
 - Problem solving
 - Growth
 - Better decisions
- Dysfunctional conflict
 - Hostility
 - Stress
 - Poor communication
 - Damaged relationships

UNIT-3

Group Communication

Small group = collection of individuals (3-15) who interact & are interdependent

Group development (Tuckman's stages)

- Forming
- Storming
- Norming
- Performing
- Adjourning

Group roles

- Task roles = help the group achieve its goal
- Maintenance / social roles = support relationships in the group
- Dysfunctional individual roles = block group progress

Decision making —

(a) Groupthink (Irving Janis)

- A mode of thinking where desire for harmony leads to poor decisions
- Symptoms = illusion of invulnerability, self censorship, pressure on dissenters

(b) Group polarization

- Group discussion tends to ~~is~~ strengthen the group's initial leaning

(c) Decision making methods

- Consensus
- Majority vote
- Authority vote
- Compromise

Leadership styles —

(a) Autocratic = leader makes decision alone

(b) Democratic = group participates in decisions

(c) Laissez Faire = minimal leader involvement

Dewey's Reflective Thinking Process -

- 1) Define the problem
- 2) Analyze the problem
- 3) Establish criteria for a good solution
- 4) Generate potential solutions (Brainstorming)
- 5) Evaluate solutions & make a decision

UNIT-4

Organizational Communication

Communication flow in organization -

- 1) Downward communication = from management to employees
- 2) Upward communication = from employees to management
- 3) Horizontal/Lateral communication = between peers/departments at the same ~~time~~ level
- 4) Informal communication = unofficial channels, rumors
(grapevine)

Communication Climate

- (a) Supportive (open, trust based)
- (b) Defensive (guarded, evaluative)

Formal networks = org chart (official chain of command)
Informal networks = who actually talks to whom
(grapevine)

Information overload = Receiving more information than you can effectively process

UNIT-5 | # Mass Communication

- Messages sent to a large, dispersed audience via media
- Distinguished from interpersonal communication by scale, lack of immediate feedback & gate keeping
- Functions of mass communication
 - Surveillance (monitor & report)
 - Correlation (explain/interpret events)
 - Cultural transmission
 - Entertainment
 - Mobilization (rallying people)
 - Validation (confirms/legitimizes an issue)
 - Sensationalization (exaggerating stories to attract attention)

Media Literacy -
Ability to:
- access
- analyze
- evaluate
- create
- understand

Global village: World
(McLuhan) is
interconnecting becoming
thus shrinking it into
one big village

* Mass Communication Theory -

- 1) Magic Bullet / Hypodermic Needle Theory:
Media messages are injected directly into
a passive audience, causing uniform,
powerful effects
- 2) Two step flow theory:
Media influence flows first to opinion leaders,
who then relay/interprets it to the wider
public
- 3) Multi step flow theory:
Extends 2 step flow - influence passes
through multiple layers of opinion
leaders/followers, not just two
- 4) Cultivation theory:
Heavy long term media exposure shapes
viewer's perception of reality to match
media portrayals

5) Uses & Gratifications Theory:
Audiences are active; choosing media deliberately
to satisfy specific needs - opposite assumption
from the Magic Bullet theory

6) Agenda Setting Theory:
Media doesn't tell us what to think, but
it is highly successful at telling us what
to think about. If the news constantly
covers a specific topic, the public
will start to view that topic as the
most important issue
